IHD for Healthcare Payors

End-to-end Analytics Workflow and Report Generation in One Platform

Panalgo's Instant Health Data (IHD) analytics platform provides clarity into patient populations and outcomes, facilitates ways to address drivers of costs and trends, streamlines operations, and provides the ability to seamlessly share data and insights with healthcare providers. IHD provides the flexibility to generate and share new insights easily, including answering ad hoc queries as they arise in real time.

IHD's low-code solution makes data analysis accessible and scalable. Users can easily analyze multiple data sources without the challenges of toggling between multiple platforms, increasing both efficiency and useability. The end-to-end platform provides standardization, meaning analysts and teams can review data in a clear, concise manner without having to juggle a variety of different data sets or outsourcing other services. This allows for seamless collaboration, flexibility, and expansion across teams.
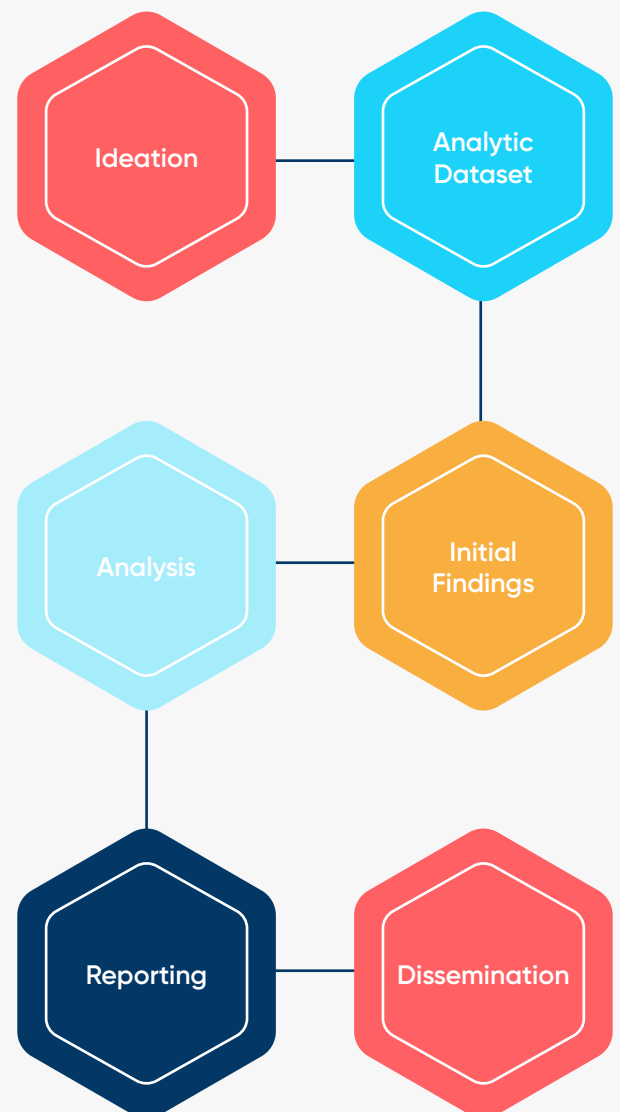

IHD Analytics allows you to scale your in-house analytics and generate insights from multiple data sources

From pre-study protocol to dissemination and decision-making, IHD answers all your questions and scales your users to optimize shareability and reduce costly outsourcing.

Enable greater access to data and use of analytics with IHD's point and click interface. Non-programmers and analysts from varied backgrounds can easily apply advanced analytic techniques and share results across the organization. IHD's common data structure allows analysts to focus on project design and implementation rather than cleaning and managing data. Companies have reduced their programming time by 85% with IHD, compared to traditional statistical programming languages such as SAS, SQL, and R.

Create and manage the lists of procedures, diagnoses, and drug codes as part of your analytic workflow and share them with ease. Disseminate your reporting on demand in a single platform without having to re-export or re-load information from multiple platforms.

One End-to-End Platform:
From Research Ideation to Dissemination and Collaboration

Ideation

Analytic Dataset

Analysis

Initial Findings

Reporting

Dissemination

Healthcare payors can address a variety of critical business needs with IHD, including:

Program Design and Evaluation

Identify members and clinical areas in need of intervention, establish key metrics for assessment, evaluate provider groups for partnerships, and measure patient success and resource utilization pre/post implementation.

Provider Profiling & Network Performance

Analyze provider referral patterns, clinical guideline adherence, incentive response, and patient outcomes.

Service Utilization Benchmarking & Trends

Track frequencies and trends of key high-cost procedures, therapeutic areas, place-of-service distributions, and report on drivers of spend.
Benefit Design

Understand unmet medical needs and emerging coverage trends, analyze common treatment patterns, site of service options, and establish data-driven guidelines.

Value-Based Contracting

Generate evidence for effective value-based care programs including bundled payment program criteria, pay-for-performance contract adherence, and clinical outcome success rates.

Formulary Decisions

Analyze the long-term effectiveness of drugs across therapeutic areas and assess tier assignment and management protocols.

About Panalgo

Panalgo provides software that streamlines healthcare data analytics by removing complex programming from the equation. Our Instant Health Data (IHD) software empowers teams to generate and share trustworthy results faster, enabling more impactful decisions. To learn more visit us at **www.panalgo.com.**
